PIYUSH PATIL

Software Quality Assurance Engineer

+91 78754 17830 · piyushpatil.da@gmail.com · github.com/Piyush3355

Professional Summary

Results-driven Software Quality Assurance Engineer with experience independently owning the full Software Testing Life Cycle (STLC) across 6+ web and mobile platforms spanning SaaS, e-commerce, and AI. Effective as a solo QA in remote, asynchronous environments, taking end-to-end ownership of test planning, execution, and defect lifecycle management. Expertise includes REST API validation, Python/Playwright automation, and specialized LLM testing. Skilled at uncovering critical security vulnerabilities and isolating complex backend edge cases to drive product stability and engineering velocity.

Work Experience

Sattvabit — QA Engineer

Apr 2026 – Present | Surat, Gujarat

- Led API testing across complex backend workflows, discovering a critical privilege-escalation vulnerability that allowed standard users to bypass authorization and gain admin access.
- Executed LLM and AI feature testing, validating dynamic prompt logic and persona-based context switching for accurate, audience-specific content generation.
- Developed and maintained Python and Playwright automated scripts to streamline regression cycles, validate core flows, and reduce manual testing overhead.
- Isolated 70+ high-impact functional edge cases, including infinite API fetching loops and payload validation failures, with structured engineering handoff documentation.
- Created Postman REST API test suites for JSON payload validation and used SQL queries to ensure data integrity across backend workflows.

CodeLamda Technologies — Quality Analyst

Aug 2025 – Mar 2026 | Surat, Gujarat (Hybrid)

- Independently owned the full QA lifecycle as the sole QA engineer across 3 simultaneous projects, from test planning and execution to defect tracking and release sign-off.
- Tested 6+ domains of a multi-platform e-commerce ecosystem: Admin panel, Librarian dashboard, Rider app, Delivery domain, Flutter app, and Web app, validating cross-domain workflows and order-lifecycle data consistency.
- Wrote basic Python and Playwright scripts for login and core user flows to support regression testing.
- Performed API testing using Postman and browser DevTools, validating status codes and identifying broken API calls; explored basic load testing with Locust.

Technical Skills

Testing: REST/JSON APIs, LLM & AI prompt validation, E2E automation, functional, regression, black-box, boundary value analysis.
Automation & technology: Python, Playwright, Postman, SQL, Locust, Git, GitHub.
Test management: Jira, Plane.so, Notion, Excel, Requirement Traceability Matrix (RTM).
Methodologies: Agile/Scrum, SDLC, STLC, defect lifecycle management, shift-left QA.
Platforms & UI/UX: Web, Android, iOS, Figma design audits.

Selected Projects

Elefant.ai — E-commerce & Logistics

Manual testing · E2E · API validation · Mobile & web

- Executed end-to-end manual and exploratory testing across Admin, Adloggs, and Rider apps, covering checkout flows, address management, and dynamic catalog filtering in Agile sprints.
- Validated order-sync endpoints using Postman and logged 30+ reproducible defects in Plane.so with structured severity and priority classifications before sprint releases.

Inbuildify — Construction SaaS

Black-box testing · Business logic · CRUD operations

- Applied black-box testing, boundary value analysis, and equivalence partitioning to Lead Management, the Quotation Engine, and CRUD modules in a multi-tenant SaaS environment.
- Performed root cause analysis on critical quotation-engine defects, enabling developers to resolve billing accuracy issues 40% faster during sprint review cycles.

Education

North Maharashtra University — B.Sc. Computer Science

2021 – 2024 | Jalgaon, Maharashtra
